ELECTRICAL SYSTEM FOR DETECTING VESSELS ON OPEN BURNERS

(ROSINOX patent)

Rosinox technology plays energy saving star

- **Energy saving:**
the burner can work only when there is a metallic vessel
- **Technology:**
based on the detection of conductivity (low voltage current) between the sensor, the metallic vessel and the grid
- **Flexibility:**
the sensor detects all metallic vessels, irrespective of its diameter; extinction of burner (controlled by timer) when the vessel is removed
- **Maintenance:**
the sensor can be easily removed for cleaning

360° rotation of sensor
